

# Drought Monitoring and Early Warning Systems search

## Which country are you working with?

If you are looking for general information, select Next and skip this question.

*Select your country(ies)*

## Are you looking for datasets or developed systems?

Some publicly datasets can be useful for drought monitoring but need to be implemented in your own systems. Some organizations also fully developed monitoring systems.

*Assessment metadata*

### Filter (Type of material)

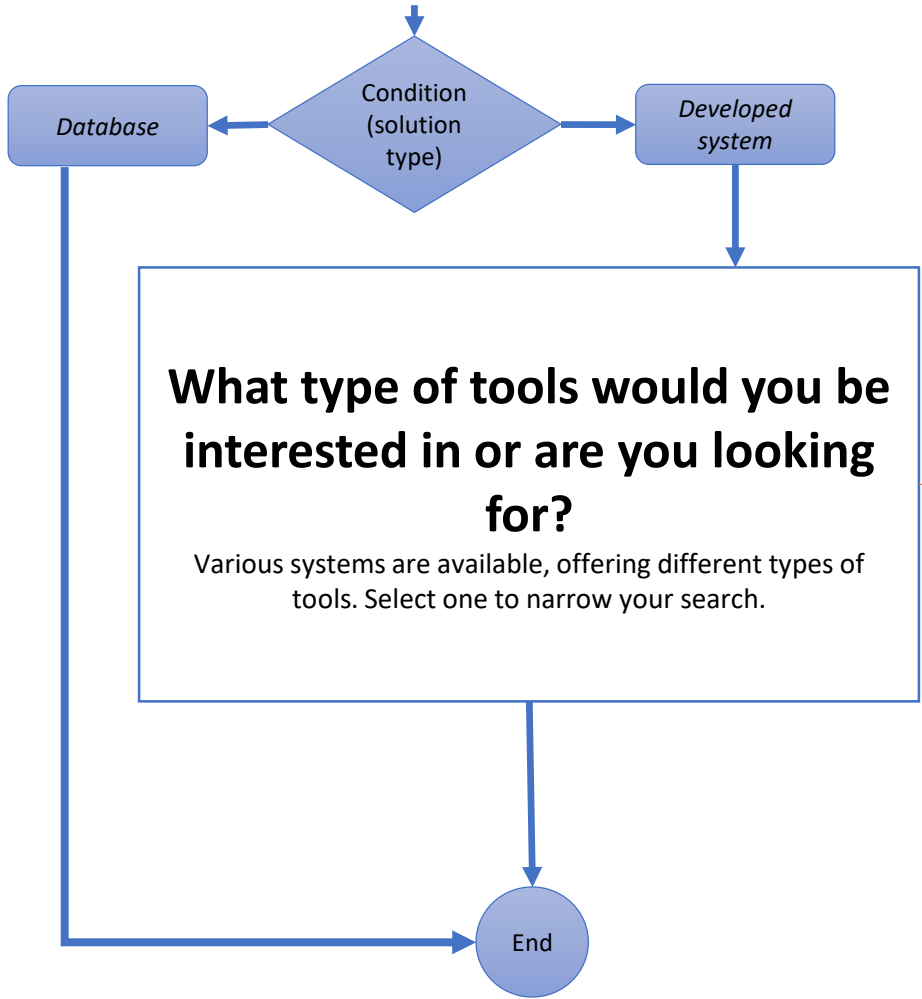

- Database
- Developed system

## Are there specific parameters that you are interested in for your working region?

There are various indices available that could be relevant for drought monitoring. If you do not know, please select Next and skip this question.

### Filter (Input parameters)

- Precipitation;
- Temperature;
- Potential evapotranspiration;
- Actual evapotranspiration;
- Satellite;
- Groundwater;
- Streamflow;
- Available water content

- Filter (material)**
- Report generator,
  - Bulletin,
  - Drought monitor,
  - Drought report
